

Project Plan & Progress

HUSTLRZZ

A planned AI mock interview coach with voice, posture feedback and candidate-owned RAG

Group 3 :

Arsh Yar Khan (2300140130013)

Deepak Gangwar (2300140130018)

Nikhil Singh (2300140130035)

Riya Rastogi (2300140130043)

Project Guide :

Er. Ashish Agrawal

Conclusion

Feedback-free preparation

Static question banks rarely provide role-specific probing or evidence-based feedback.

Single-dimension tools

Many tools focus only on answer content and miss delivery, posture and eye contact.

No private interviewer

Candidates need an affordable, always-available space to practice under realistic pressure.

Problem Statement

Current automated preparation tools do not connect the candidate's real context with a live, multi-dimensional evaluation.

Automated preparation today

- Static question banks — no resume or role adaptation
- Keyword matching — limited understanding of depth and structure
- No live feedback on non-verbal cues

Our plan

Generate role-specific questions from the candidate's own context → conduct a real-time conversational interview → score answers → track posture in parallel.

Literature	Key Finding	Gap Identified
Lewis et al. (2020) - RAG	Retrieval improves LLM grounding using external knowledge.	Not personalized for interview coaching.
BlazePose (2020)	Enables real-time on-device pose estimation.	Not interview-specific.
Yoodli (2026)	AI-based interview and communication coaching.	Focuses strongly on speech/communication coaching.
PolyInterview (2026)	CV/JD-based multimodal mock interviews with content, vocal and non-verbal assessment.	Leaves room for different privacy/RAG architecture and candidate-owned longitudinal context.

How It Works

In progress: candidate-owned documents and prior reports are retrieved as source-labelled context for relevant follow-ups.

Architecture — target design

Real-time interview coaching with private browser analysis, resilient AI, and candidate-owned retrieval.

Privacy and reliability by design: video never leaves the browser; RAG is user-scoped; a retrieval failure never blocks practice.

Technology Stack

Frontend

Next.js 16, React 18, Tailwind

Backend

Python 3.14, FastAPI 0.141

AI

Free tiers only; BYOK for paid

Database

Supabase Postgres + pgvector

Speech

Browser Web Speech API - STT + TTS

Body tracking

MediaPipe tasks-vision —
pose, face, hand, in-browser

Deployment

Vercel (front end) and Render (API),
deployed independently

RAG

Candidate-owned, user-
scoped

Demo — the working path today

1

Open the web app and
sign in

2

Submit a resume and
target Job Description

3

Start an interview; AI
asks a role-specific
question

4

Answer by voice;
observe the follow-up

5

Show the live camera
posture signal

6

End the session →
report and history

Current Progress

About 40% of the plan is functional today; the remainder is complete at the interface level and is being integrated next.

1. Prepare

2. Practice

3. Progress

Follow the steps — each one feeds the next.

Run a realistic interview.

A live human-sounding interviewer, your camera presence, and a scored debrief - all in one studio.

Ready To Configure

Interview brief

Choose your interview brief

The interviewer uses its questions, company context, and your candidate-owned knowledge.

No prepared pack yet

Use Prepare first to create a grounded interview.

45 min

Interviewer persona

Before you begin

Session readiness

Grounded questions

Questions come from your selected role, resume, and current company brief.

Natural responses

Speak or type in your own words; the coach can probe shallow answers.

Private presence feedback

Posture, gaze, and gesture signals run locally in your browser.

Tip: answer behavioral questions with Situation → Task → Action → Result, then add what you learned.

Prepare

1. Prepare → 2. Practice → 3. Progress

Follow the steps — each one feeds the next.

Prepare for the role you want.

Add your experience and target role. Hustlrzz will create a focused question pack and research the company when requested.

Prepare your interview

Upload a PDF/DOCX resume or paste its text. The coach generates personalized questions, model answers, and a JD-vs-resume match report.

1 Resume → 2 JD → 3 Pack

Try sample

Your preparation material is used to personalise this workspace.
Camera analysis remains in your browser.

1. Your resume

Upload PDF or DOCX

Paste your resume text...

Generated pack

Your practice pack will appear here.
Step 1: Add resume + JD. Step 2: Practice. Step 3: Review progress.

STAFF PRODUCT DESIGNER — EVIDENCE NOTES · NOTES & TALKING POINTS

68% match

Led the redesign of the B2B CRM onboarding flow, cutting time-to-first-value for new accounts from eleven days to three. Owned the research programme across six customer interviews and two usability studies. Partnered with engineering to ship a component library adopted by four product teams.

Enhancements

RAG quality & coverage

Expand approved sources, hybrid ranking and retrieval evaluation on the pgvector foundation.

Cross-session coaching

Compare current reports with prior feedback to show measurable improvement over time.

Offline options

Explore smaller local models for lower-cost or offline practice.

Richer rubrics

Add more assessment dimensions and stronger behavioral scoring.

Conclusion

- ✓ Role-specific questions from a real resume and job description
- ✓ Live voice or text conversation over Web Sockets
- ✓ In-browser body-language feedback
- ✓ Final structured scoring and coaching report
- Planned next: coaching workspaces, assessment, settings and data rights
- ✓ The core journey works today; the remaining screens are built and are being integrated next.
